Summary

The meeting centered on clarifying how to use Asana within the EHS group, focusing on goals, project permissions, team structure, and available templates. First, goals are not yet reliably functional; attendees were advised not to connect goals to larger projects for now. Personal goals can be added in a self-made tab, but for 23 Safety projects nothing should be connected to goals until a later (likely Q2) enhancement. There was also emphasis on using the training resources and scheduling one-on-one help if anything is unclear.

Second, they discussed project permissions and the team structure. All work should live under the EHS team umbrella, and private or rogue sub-teams should be avoided to maintain visibility and transparency. When creating or editing a project, assign the correct team in the project details; the EHS team is typically set as a viewer, with select cases (like toolbox talks or certain implementation work) where the EHS team may be an editor. Project admins (and/or Gloria or Donna) can be added to help keep things clean and aligned. There was debate about whether separate teams are needed for calendars or reporting, but the current approach is to keep projects under the EHS team with individual members added to projects; multi-homing projects to multiple teams isn't supported in the system, though they plan to revisit this with Asana.

Finally, they touched on templates, training, and next steps. There is a Construction Beta Template available for new construction projects, which Patrick helped clean up; teams are encouraged to download and start with it. They also reiterated that Asana should be used for new initiatives and improvements rather than migrating every existing process. Kate asked about setting up a 23 Safety folder to support multi-homing, and Gloria said she would set that up; Rebecca was acknowledged for timely updates in Asana. They urged ongoing reference to the training materials and to schedule one-on-one sessions with Gloria for personalized help, with the overarching goal being improved visibility and leadership support rather than micromanaging.

Next Steps

- Do not connect goals to projects for now; personal goals allowed. Plan a formal goals enhancement in Q2.
 - Owner: Gloria Gonzales / Donna Lynch (communication and policy)
 - Timing: ongoing; communicate at next meeting
- Create and demonstrate a personal goals tab (My Goals) for users to input individual goals.
 - Owner: Gloria Gonzales

- Timing: next meeting / this week
- Audit and fix project permissions and team structure
 - Default: projects under the EHS team with EHS as viewer; add project admins/editors as needed (e.g., for toolbox talks or implementation lists)
 - Action: review all active projects and adjust permissions
 - Owner: Gloria Gonzales (with Donna Lynch)
 - Timing: within 1–2 weeks
- Consolidate teams under the EHS umbrella; avoid rogue/private teams
 - Action: plan and execute consolidation by coordinating with affected users (e.g., Boyd, Jesse)
 - Owner: Gloria Gonzales / Donna Lynch
 - Timing: soon
- Decide on engaging a consultant; compile a bank of questions/needs to justify the investment
 - Action: draft and circulate a list of topics/clarifications to address with a consultant
 - Owner: Donna Lynch (with input from Jesse Kenser / Kate Crawford)
 - Timing: before next meeting
- Construction Beta Template: download, set up, and designate a pilot to configure and prune
 - Action: assign a construction team member to pilot the template and clean up excess fields
 - Owner: Construction team lead (point person to be named)
 - Timing: soon
- Set up the 23 safety “older” to multi-home to the two projects Kate referenced
 - Action: configure multi-home to references/resources and department policy and risk assessment
 - Owner: Gloria Gonzales
 - Timing: by end of this week
- Schedule one-on-one help sessions as needed
 - Action: invite attendees to book a 1:1 with Gloria
 - Owner: Gloria Gonzales (calendar management)
 - Timing: ongoing
- Clarify work streams vs. projects in Asana; confirm guidance on what should move into Asana
 - Action: discuss and confirm approach at next touchpoint
 - Owner: Donna Lynch / Gloria Gonzales
 - Timing: next meeting

- Reminder: reference trainings and use one-on-one sessions if confused
- Action: encourage ongoing reference to trainings; schedule 1:1 as needed
- Owner: Gloria Gonzales
- Timing: ongoing

Transcription

Gloria Gonzales: Are you ready? Do we have more people?

Donna Lynch: people from construction joined, but yeah, let's go. We're okay. Okay. So the only things that I really have on the agenda are a couple of things.

Gloria Gonzales: was gonna have people ask questions if they have any. But the first thing that I have been hearing quite often is people are still concerned with goals and that was in the original training. We're not connecting goals or putting in goals or doing anything with goals yet, especially because we've now run into some issues with it. So don't worry about putting goals in or doing it and you'll be able to do it.

Gloria Gonzales: anything like that because it's just not it's not working properly for us yet. You can put in your personal goals like if you want to create your own tab and put your own personal goals in there and not connect them to anything that's fine. But for bigger projects that are in 23 safety, just don't connect goals to anything. Yeah, Donna. You can put your own personal goals in there and not connect them to anything.

Gloria Gonzales: anything like that because it's just not it's not working properly for us yet. You can put in your personal goals like if you want to create your own tab and put your own personal goals in there and not connect them to anything that's fine. But for bigger projects that are in 23 safety, just don't connect goals to anything. Yeah, Donna. You can put your own personal goals in there and not connect them to anything.

Jesse Kenser: And you did it again.

Donna Lynch: Can you share screen so you can show people reinforce for them that section that we're talking about where the goals are? Yeah, to do not to do.

Gloria Gonzales: Goals.

Gloria Gonzales: Goals.

Gloria Gonzales: Right. Oh, it's so like we have eHS team goals, cred ops and construction and don't worry if you don't have these views. It doesn't matter right now, but if you want to make your own goals, you just hit this little plus button that says add tab. That's how you add a tab and you can create a tab that says my goals. And then that.

Gloria Gonzales: where you can put in, I had my 2025 goals in here, but then I wrote my 2026 goals in one. So they're all listed in here instead of having one goal for each. But you can set that up however you want to. It's just you should have a personal tab for only your goals.

Donna Lynch: sense it does and then your message is once you're in a project where are

people getting hung up that they're trying to connect them and this is where we don't press you not to worry about it. It's an

Gloria Gonzales: like if you go to any project and then in the overview tab, that's where you'll find connected goals. And this is only showing a goal because it's, this was like when we were building it out. So this is old, but you shouldn't have any connected goals under here.

Donna Lynch: So I'm just going to disconnect that. So what we're saying is don't get hung up on this right now. Don't worry about it. This will be a second quarter. At the earliest. Enhancement.

Gloria Gonzales: Yeah. So that's it for goals. Does anyone have any questions on the goals?

Gloria Gonzales: Okay, cool. Okay, and then I'm going to share screen again, but for permissions on projects. So I know everyone is getting into 23 safety and getting projects set up in there. So I sent the email about deleting the construction, EHS team and the Courtaulds EHS team. So now everything lives.

Gloria Gonzales: and you get this little down arrow right here next to the project name and then edit project details and that's where you're going to see which team you're on. So the other thing I've been seeing with teams is people are creating private teams. You should be creating private teams. It should all be under EHS.

Donna Lynch: Why are there why for those that have been creating a separate team? What I must you're doing it because you're trying to achieve something or so let's talk about that why what's the thought about creating a private team so we can assess that out and understand because there's probably you're probably trying to do something that there's functionality elsewhere in the tool that you just don't know how to use. So someone share that's that's tried to set up their own team.

Boyd Sylvester: my own team. And I did it because I look at that I wanted to have a team where I can actually build it small and then get it to be a larger team as I go. So I built a, I think it was PCF and CIF team under the energy-based safety. And I saw that that would be an easy way to get going with it, get the things set up and then add team members.

Boyd Sylvester: as I was getting after I got my plan and the quarterly project roadmap put in there and all that stuff and then start to share it with teammates as I was needed and who needed to be participating.

Donna Lynch: So correct, Gloria guide me. I'm going to try to answer that or so. Like this is actually a great example. This project is under the EHS team, but if you look up in the upper right corner, there are two team members. There's Gloria and there's myself. So I think with what when I heard you're doing, Gloria, you've got a working team. You've got people that are be working on this project. No, add them as members, but this project sits under the entire EHS.

Donna Lynch: umbrella as that team. Yeah. So let's parse out the, does that help with terminology? Asana is calling it team, which is all of our stuff goes under eHS team. There's no need to create a sub team. What you're trying to do is you add members to a project, right, that can do something. So you're creating. Yeah, I can do that. But when I

Boyd Sylvester: I looked at, I needed a team. So, and I actually, I talked with, talked last week a little bit about this and I can't delete. I don't have permissions to delete a team. That's the other thing. Once you create a team, I don't know that you have permissions. Oh.

Gloria Gonzales: Boy, we can set up a separate call and we're-

Boyd Sylvester: Yeah, but we're probably gonna

Boyd Sylvester: Yeah, but we're probably gonna

Gloria Gonzales: like if you can't delete it then I'll go in and delete it. But it can get kind of tricky when you make a different team. So just find some time on my calendar whenever works for you.

Donna Lynch: But for the rest of the team, for the rest of the people on the meeting, does that make sense? So what was trying to achieve right is there's a group of people that are going to be working on his project. And to add them, once you set up that when you go to set up a project, it defaults to eHS team that gives me and everybody here visibility, which there's no reason anything we're working on shouldn't be visible. Everybody, and you can see right on this one eHS team members, you can all view it.

Donna Lynch: The only people that can work on it right now are Gloria and myself. So it boyds example for piece of for whatever. It should set an entire team should have visibility that that project is happening within the EHS team department. I'm used word department. We should have visibility that that is an activity that's happening within our department and then void adds project members individually to that project. Does that make sense?

Donna Lynch: and does that translate to the other things that you guys are trying to do so that we don't get into this trying to have to go to lead teams that are rogue teams that are set up?

Donna Lynch: But this is good. You and Jesse, you got to try to break it for me. And this is perfect. This is the kind of stuff that we need to. Oh, I'm glad you brought Jesse in. I knew he was out there. He did. We had to go with him and with a big stick a couple of weeks ago too.

Jesse Kenser: still don't see why we can't have separate teams that are still underneath the EHS team because I'll tell you the reason that I was putting my team together. It was the OPS EHS team. And the main reason for that, I'm going to still share for a second, was then I would have access to a calendar for my team, all the work that's going on with my team, all the overview.

Jesse Kenser: of all this different stuff. At the end of the year, I'll have reporting where I can report specifically on my team instead of having to go, I don't know how I'll do it on the big overall team. But that was the reason that I tried to put a stack operations team together was for calendars overview when I go in here to ask AI specifics about my team, the things we're working on, it would be able to do that. And the other thing is adding people to a project,

Jesse Kenser: Right now I have five people, six people on my team in three years.

Jesse Kenser: I'm gonna have to add 10 people every single time I go do that instead of just

clicking on a cradobsihs team And looking in the Asana training that was all the things that they specifically pointed out why you want to use teams for all these different things So yeah, that's that's what I was using teams for and that's why I was so upset that you guys

Donna Lynch: Sorry, do we have an articulate way to answer that yet? Or do we still need to get back with the song? I should be able to better articulate to the team of the why behind us. I think probably.

Donna Lynch: Sorry, do we have an articulate way to answer that yet? Or do we still need to get back with the song? I should be able to better articulate to the team of the why behind us. I think probably.

Gloria Gonzales: to work with Asana, consulting a little bit more, but at the same time, we really just narrowed it down to the EHS team because there's already so many teams in Asana that are going to keep expanding because more and more departments at staff are using Asana.

Jesse Kenser: limit to the total number of teams we can have in there. I mean we don't look at this.

Gloria Gonzales: just for confusion wise, we didn't want to have three different teams for EHS.

Donna Lynch: Well, that's part of it. And well, here's my other problem with it. And maybe there's another way to solve it. But today, if I'm wrong and it's hidden here somewhere, I can't see it because Boyd set up his own team. I have no visibility to it. Jesse has no visibility to it. I don't need to be able to change it. I don't need to be necessarily. I might not have a role in your team. But this is part of the point of what we're trying to get everybody into sauna is because our team needs a lot.

Donna Lynch: have better transparency, visibility, and knowledge about what's happening. And so I don't know how to make that happen if we're setting up rogue teams. We can take that back and find that out with us on it. But that's one of like my immediate why the asks is all the all the work on it.

Jesse Kenser: doesn't necessarily only live on that team. So I would, my team would connect the EHS overall team to it. But then our projects would then only have the EHS Critops team. So you can have multiple teams. You can have projects save to multiple teams. So if I had all of my Critops projects also saved to the overall EHS that everybody would still have the ability to view it.

Donna Lynch: can save.

Gloria Gonzales: You can't save projects to multiple teams. That's why when you go in here to you can

Donna Lynch: something different. Multi-homing is adding to different portfolios.

Gloria Gonzales: For edit project details, you can only select one team.

Jesse Kenser: That's what we're talking about.

Gloria Gonzales: right here.

Jesse Kenser: the team underneath.

Jesse Kenser: Well, I have my reason-

Donna Lynch: We're not going to do it. We don't need to waste time trying to solve it. Well, we'll commit to you guys though. I hear and we've got notes. We're there. Some other things that we need to go back strategically with Asana to work through. And we will ask this and figure this out because I do truly understand the ease of what you you and boy are referring to. But for today is we're trying to set up some of these. And what we're trying to initially achieve. Can we just ask that we play by these rules for right now.

Donna Lynch: We're not going to do it. We don't need to waste time trying to solve it. Well, we'll commit to you guys though. I hear and we've got notes. We're there. Some other things that we need to go back strategically with Asana to work through. And we will ask this and figure this out because I do truly understand the ease of what you you and boy are referring to. But for today is we're trying to set up some of these. And what we're trying to initially achieve. Can we just ask that we play by these rules for right now.

Donna Lynch: So we get enough questions banked out that we can justify hiring this on a consultant to come back in. Is that the ask for today?

Donna Lynch: Yeah, just like I do hear you guys why especially we need in this tizen, what Jesse is just explaining what he's trying to do with being able to see it in the year, that oscillatize into this whole goal thing that we don't have figured out how to best use in the tool today. So um, but what else did you have? I'm just gonna have seven minutes left.

Gloria Gonzales: really all I had, but permissions on, so we kind of went over this, but permissions on projects. So when you're building out a project, make sure that you're on that correct team, but then I'm going to give a couple examples where EHS is going to be editor instead of viewer. But when you're creating a team, this is just about what it should look like. So whoever's working on the project with you set their level as whatever it needs to.

Gloria Gonzales: be project admin editor commenter or

Donna Lynch: or remove them from the back.

Gloria Gonzales: And then EHS teams should be set as viewer almost every time. The only times when I've had EHS team as not a viewer, I think is with toolbox talks. Yeah. So with toolbox talks, since there's potential that construction is going to come in and work on this with us in the future, I put EHS team as editor. So that's one example. But every other time almost.

Gloria Gonzales: every other time it's viewer. But if you have an example like that, like another one is our Asana implementation. Since anyone can go in here and add to our phase two list, that's when I have EHS team as editor as well. So this is just the implementation team that are editors or project admin. And then the EHS team is an editor so that you guys can go in and edit this project or add tasks to the project. So keep that in mind but when

Gloria Gonzales: you set up your project, just make sure that this looks correct. It's up here

in the top right hand corner. And then the last thing I'll say about that is, it's probably a good idea to add me and or Donna as a project admin or an editor on your projects just so that we can make sure that everything is cleaned up because I've been seeing like random teams, I've been seeing random teams,

Gloria Gonzales: and projects or goals or whatever, and we need to be able to go in there and make sure that we're just moving along at a slow pace so that everybody is on the same page. That's the only reason why it's not to change anybody's projects or work on anything or whatever, but it's just to keep us all on the same page so that we can move forward together.

Donna Lynch: thing to that and I hope this goes without saying, you know, as we've been working together, but this is not about micro-managing any of you and I don't think any of the leaders between myself and Jesse and Bulletin Kate and none of us are micro-managing this. This really is about just we are growing too big, too fast to not have leadership visibility on all of the things going on in projects and the value that it brings to me and to all of you, also...

Donna Lynch: for being able to see this is I can advocate better for all of the good work our team is doing if I know what we're doing and I quite frankly haven't had that kind of visibility or the way to report on it. The way of pull it up and that's what this is going to do for us right you guys are doing incredible work that's benefiting an only stack. But the industry in this is part of it want to make us a little more efficient make us work better as a team but just to have visibility. I don't need to be on your project. I'm going to do anything I just need to.

Donna Lynch: know what's happening. So I just want to say that and if you disagree and if you feel like you're being micromanaged please set up some time one on one to talk with me about it because that is not the goal of this. Okay real quick I know we're almost done. So I talked about visibility work streams. I guess just one quick point on work streams versus projects. The intent of Asana we talked about this is in relation to one of our vendor management projects. Asana is in a

Donna Lynch: about taking a few, if we have a process that's working well, it's not about taking that process and moving it into Asana. Asana is really about managing what improvements, what projects, which new initiatives that we're trying to move forward. So kind of keep that in mind. If you have any questions on whether, do I move this list or this loop thing that I was working in before, should I move it into Asana? Let's talk about it, you may not need to move it at all, that may not be the point. So there's confusion there, let's chat. And then the last thing.

Donna Lynch: for the construction team especially. There is a template out there that Patrick did a bunch of work on. We kind of cleaned up some of the tools. If you go out to set up a new project, it's in you go to my company. There's a one out there and it's called Construction Beta Template. I'd encourage you to potentially download that, set up a set that up and work with it because we know it's not where it needs to be, but I need somebody to get in there and work with it and delete stuff. Like, this is too detailed.

Donna Lynch: or we forgot this activity. Here's the things that I do on my project. So I just

wanted to point that out, but that is a template that Patrick kind of did. Patrick put a bunch of work in. We kind of cleaned up a few of the fields and it's a starting place for construction projects. So that's the last thing I had. Anybody else questions? Things we need to touch based on in the next one of these meetings.

Gloria Gonzales: Sorry, I do have one last thing.

Donna Lynch: into

Gloria Gonzales: Bye

Kate Crawford: until very end because it's specific to Gloria and I.

Donna Lynch: So go ahead, Gloria.

Kate Crawford: the end. Okay.

Gloria Gonzales: So just super quick, please remember that these trainings are in...

Kate Crawford: Department.

Donna Lynch: and then the-

Gloria Gonzales: Um, reference these trainings, like if you are working and you're confused on something, um, it's great to work with someone else, but please reference.

Kate Crawford: I also have...

Gloria Gonzales: to schedule a one on one with me. If you need any help, please schedule time with me. That's why we put the schedule one on ones in both of these trainings. And then that's why we made these trainings, so that

Kate Crawford: reference them. So I

Gloria Gonzales: like doing and saying things that are in these trainings. So make sure you're going back and referencing these if you have any confusion and make sure that you're scheduling one on ones with me too because that's the whole point of like doing this. So if you have any questions, I'm always like my calendar is always up to date. So just schedule time. Kate.

Kate Crawford: My question was simply, did you set up yet the particular 23 safety older that I needed to be able to multi-home to? So remember I had two projects. Yeah. Yeah. So which folder was it?

Kate Crawford: My question was simply, did you set up yet the particular 23 safety older that I needed to be able to multi-home to? So remember I had two projects. Yeah. Yeah. So which folder was it?

Kate Crawford: either references and resources or department policy and risk assessment. I think it was references and resources. Yeah, I think.

Gloria Gonzales: I haven't yet, but I can do that.

Kate Crawford: would that be great because later this week I'll work more on Asana. And

while Rebecca's on the college just want to give her some props because it makes me smile every time I get a message from Asana that says Rebecca has completed something or has commented on something and I'm like, yo, Rebecca, you rock. So I'm just giving you a call out there.

Gloria Gonzales: Thank you. Let me hear it. Does anyone else have any questions before we?

Kate Crawford: Thank you. I'm going to drop. Thank you, Gloria. Thanks, guys. Thank you.

Brandy Fischer: You
